This mixed-method approach shows that bots are not only emerging as a widely-accepted tool of computational propaganda used by campaigners and citizens, but also that bots can influence political processes of global significance. Citation: Samuel C. Woolley & Douglas Guilbeault, "Computational Propaganda in the United States of America: Manufacturing Consensus Online." Samuel Woolley and ...

[Conclusion: Political Parties, Politicians, and ...](#)

Computational propaganda is a growing concern in Western democracies, with evidence of online opinion manipulation orchestrated by robots, fake accounts, and misinformation in many recent political events. China, the country with the most sophisticated regime of Internet censorship and control in the world, presents an interesting and under-studied example of how computational propaganda is used.

[Computational Propaganda](#)

This book argues that such automation and platform manipulation, amounts to a new political communications mechanism that Samuel Woolley and Philip N. Noward call "computational propaganda." This differs from older styles of propaganda in that it uses algorithms, automation, and human curation to purposefully distribute misleading information over social media networks while it actively learns ...

[Philip N. Howard](#)

It tackles the occurrence of computational propaganda, defined as manipulative digital disinformation campaigns that use algorithms, automated products (bots) and human curators to drive misleading propaganda to the top of social network feeds for political purposes. They are used to "manufacture consensus" or to generate "the illusion of support for a political idea or policy" or politician ...
